community water grants

Making a real difference to the way communities
use Australian water resources

It's time to become water efficient!

To achieve an environmentally sustainable society we must re-assess our relationship with water, and learn to use it more sparingly.

This requires behavioural change; we must re-assign a value to water that truly reflects its worth.

Quang Minh Temple

At the Quang Minh Temple, ECS engineers designed and successfully applied for the funding under the Community Water Grants scheme to provide the community with an annual water reduction of 652 kilolitres.

This reduction in water consumption not only saves the community \$1,171 every year, but was funded entirely by Community Water Grant.

Northcote High School

Northcote High School now saves 882 kilolitres of water each year thanks to water saving designs by ECS engineers.

This water saving saves the school \$1,286 every year and was funded entirely by Community Water Grant.

Offices throughout Australia

printed on recycled paper

As part of Community Water Grants rounds 1 & 2, Energy Conservation Systems helped 8 schools and 4 community organisations achieve a total \$497,841 in funding and reduce their combined annual water bills by \$10,209.

That's an average saving of \$851 per annum for each school or community organisation.

The combined total of water saved through Community Water Grant projects designed and managed by Energy Conservation Systems is 5,843 kilolitres every year!

The ECS advantage

ECS engineers design water saving initiatives to suit the specific requirements and opportunities at each individual site, we have the skills and expertise to identify a wide variety of the latest water saving technologies and techniques.

ECS will audit your existing water consumption, review and model your historical water consumption, identify techniques and technologies best suited for your site, design and create a detailed proposal and complete the Community Water Grant application on your behalf.

When your Community Water Grant is approved ECS will manage the installation process to ensure the maximum benefit and water savings can be achieved from the funding.

Through partnership with Environment Victoria, we also offer information sessions to provide you with the tools to help you to reduce your water consumption in your organisation, your school or at home!
